OASIS ATC Notes

Posted: August 27, 2007

Posted on OASIS: July 20, 2007

Effective Date: July 20, 2007

The ATC margin documented in the posted related ATC Methodology document as "ATC Methodology Margin" (AMM) will be posted in the OASIS field labeled "Transmission Reliability Margin" (TRM). Rounding is applied to the displayed path MW values posted in OASIS Sys Data. This means that the actual available MWs may be a fraction of a MW more or less than what is shown. A request has been submitted to display truncated values in OASIS Sys Data.

This bulletin will be updated when the correction is made.

Example 1

25 MW shown in Sys Data, may actually be 24.90 MW. In this case a 25 MW request would be COUNTEROFFERED 24 MW even though 25 MW is shown as available.

Example 2

25 MW shown in Sys Data, may actually be 25.45 MW. In this case a request with an impact of 25.40 would be ACCEPTED even though only 25 MW is shown as available.
