

## Bonneville Power Administration Actual and Forecast Peak Load

The forecast assumes a continuation of actual conditions, adjusting for expected weather conditions, day of week, month, and holidays. Load forecasts are developed using neural net and regression applications, which use weather data forecast by BPA and load data from BPA's metering data collection system. These assumptions will be updated only when BPA's forecasting process changes.

<b>BPA Control Area Load</b>				
<b>Date</b>	<b>Day Ahead Peak Load Forecast</b>	<b>Hour</b>	<b>Actual Peak Load</b>	<b>Hour</b>
11/23/09	7,965	8		
11/22/09	7,355	18		
11/21/09	7,280	18		
11/20/09	7,209	8		
11/19/09	7,455	8	6,978	8
11/18/09	7,370	19	7,495	8
